

## Transfer bridge for the Graiter tunnel

**Main contractor**

Groupement Tunnel de Graiterie

**Sub-contractor**

Marti Technics Ltd.

**Drawn up**

2009

**Services provided by Marti Technics Ltd.**

A 60 m transfer bridge was built for the Graiterie tunnel, which had a cantilever middle section with a length of 28 m in order reinforce and concrete the 12.5 m lower part. The bridge was designed to be used by construction site vehicles with a maximum weight of 70 t, so that work could be carried out continuously below the bridge while it was being used.
